

Please fill in the fields and email this form and photos (see instructions below for what photos are required) to jannaweir@hotmail.com.

In order to create a saddle that fits the rider, the following measurements may be required:

1. The riders height _____
2. The riders weight _____ (this helps our saddle maker know what seat size fits best for the rider).

In order to create a saddle that fits the horse, the following measurements may be required:

1. The horse's height _____
2. The horse's age _____
3. The horse's condition. (Is the horse fat / skinny or normal?) _____

Ideally, two photographs should be taken and emailed to jannaweir@hotmail.com:

1. First, a photograph showing the side view of the horse to show the shape of the wither (without the saddle)
2. Second, a photograph taken from behind the horse's tail looking forward, to show the shape of the back.
3. Horse must stand square on firm level ground.

Remember:

That the horses can change shape depending on:

- Age
- Fitness
- Time of the year.

(This will affect the saddle fit).

A new saddle is like new pair of shoes, always breaks in gradually to allow the panel to shape to your horse.

Ideally use one saddle for one horse.

Our saddles are made from the highest quality which will last a long time if looked after properly. And any saddle fitter in the U.S. can adjust the stuffing in your new saddle, for a perfect fit on your Friesian horse!
